

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Mr. Walton I. Mitchell desires his address changed to El Parvenir, New Mexico.

A CORRECTION.

Editor of THE WILSON BULLETIN:

Dear Sir:—Please make the following corrections in my note on page 8 of BULLETIN No. 8: For Water Thrush (*Seiurus noveboracensis*) read Grinnell's Water Thrush (*s. n. notabilis*). A careful study of the specimen convinces me of the error. Yours truly,

SIDNEY S. WILSON.

St. Joseph, Mo.

ERRATA.

In BULLETIN 19, p. 25, line 10, for Conk read Couk.

Line 16, for Chiprie read Chipnie.

Line 23, for nearly read nearby.

PUBLICATIONS RECEIVED.

Gleanings from Nature, No. 1. *Oological Abnormalities*. By J. Warren Jacobs. This is the first of "A series of pamphlets based chiefly on the author's research in ornithology and oology and published from time to time as accumulating material and data permits." In the preparation of this pamphlet "Over one hundred sets of eggs [110], each containing one or more abnormal specimens, have been bro't together along with the copious notes appertaining thereto. Care has been taken to incorporate in the paper only such notes as have been properly authenticated and are based wholly on abnormal sets in the author's possession."

In the first sixteen pages of this pamphlet the author presents in tabulated form both the average size of a number of normal eggs and the actual measurements of abnormal ones; and discusses briefly some of the reasons for the production of abnormalities in "Size," "Color," "Contour." In the remaining twenty pages the 110 sets in which abnormal specimens are found are carefully described, and the abnormal features are made to at once appeal to the eye by being set in italics.
